

vTv Therapeutics Announces Inducement Grants under Nasdaq Listing Rule 5635(c)(4)

July 28, 2026

HIGH POINT, N.C., July 28, 2026 (GLOBE NEWSWIRE) -- vTv Therapeutics Inc. (Nasdaq: VTVT), a late-stage biopharmaceutical company focused on the development of *cadisegliatin*, a novel, potential first-in-class oral adjunctive therapy to insulin being investigated for the treatment of type 1 diabetes (T1D), today announced that it granted 23,500 stock options to purchase shares of common stock to two non-executive employees as a material inducement to employment in accordance with Nasdaq Listing Rule 5635(c)(4).

The stock options that were granted have a weighted average exercise price of \$31.95 per share. Each option award will vest over a 4-year period, with 25% of the shares underlying the option vesting on the one-year anniversary of the applicable vesting commencement date and the remaining shares thereafter vesting quarterly over the following 36 months, subject to continued employment with vTv on such vesting dates. The options have a term of 10 years and are subject to the terms and conditions of the 2026 Inducement Plan and the stock option agreement covering the grant.

About vTv Therapeutics

vTv Therapeutics is a late-stage biopharmaceutical company focused on developing oral, small molecule drug candidates intended to help treat people living with diabetes and other chronic diseases. vTv's clinical pipeline is led by *cadisegliatin*, currently in a US Phase 3 trial, a potential first-in-class oral glucokinase activator being investigated for the treatment of type 1 diabetes. vTv and its development partners are investigating multiple molecules across different indications for chronic diseases. About Cadisegliatin

Cadisegliatin (TTP399) is a novel, oral small molecule, liver-selective glucokinase activator being investigated in the US as a potential first-in-class oral adjunctive treatment for type 1 diabetes (T1D). In non-clinical studies, *cadisegliatin* acted selectively on the liver and increased the activity of glucokinase independently from insulin. These studies support clinical investigation of whether *cadisegliatin* can improve glycemic control through hepatic glucose uptake and glycogen storage. *Cadisegliatin* has been granted Breakthrough Therapy designation by the U.S. Food and Drug Administration (FDA).

Cadisegliatin is under investigation, and the safety and efficacy have not been established. There is no guarantee that this product will receive health authority approval or become commercially available for the use being investigated.
